SKILLS

C#/.NET Core | Python | C++ | C | Bootstrap | PL/SQL | Linux | GIT

EDUCATION

Computer Science   10/2021 – present | Bucharest, Romania
University of Bucharest Faculty of Mathematics and
Informatics

Mathematics-Computer science   09/2017 – 06/2021 | Bucharest, Romania
National College "Şcoala Centrală"

CHALLENGES

Reply Challenges - 2022 Cybersecurity 24h Hackathon   10/2022 – 10/2022
Position : Top 3%
Reply Cyber Security Challenge is a 24-intense-hours, international CTF competition made of 5 categories:
Coding, Web, Miscellaneous, Crypto and Binary.

Nitro - Natural Language Processing Hackathon   03/2023 – 03/2023
Nitro NLP is a natural language processing hackathon, where we needed to build a model to solve a text
classification problem, given a dataset of texts and 5 categories. I participated along 2 colleagues of mine.

Romania Fara Dosar - Civis Hackathon   03/2023 – 03/2023
Romania Fara Dosar is a Civis Hackathon for students, where we merged with a communication team, and
together we needed to implement a solution for the given hackathons theme, which was to eliminate the
queues for submitting your documents.

PROJECTS

Social Media Platform - ASP.NET Core MVC ⚲
In this project we needed to create a social media platform where you can create an account, add friends,
enter groups, send messages to the groups, create a profile, edit a profile , or post a message on the main
page.
Technologies Used : Razor, ASP.NET Core MVC, Bootstrap

StartViitor - Appointments Platform - Romania Fara Dosar - ASP.NET MVC ⚲
In this we implemented a digital solution for solving the problem of waiting at queues for submitting your
documents. We implemented features like an user profile, history of appointments, as well as a feature that
auto-completed the data for you, based on your profile information.
Technologies Used : Razor,ASP.NET Core MVC,Bootstrap

Text Classifier - Nitro NLP - Python Machine Learning Project using SVM
This project was a team project along 2 colleagues of mine, where we needed to implement a model that
trains on a given dataset, which included a text, and a category, and then executes on a test dataset. The
leaderboard was based on the models accuracy on the test set.
Technologies used : Python, Scikit-learn, Pandas

DBXCLI-Shell - C
DBXCLI functionalities by creating a shell. We needed to implement all the dropbox shell commands, such
as mkdir, rm,cp,mv, but the shell was linked to the local files system.
Technologies Used : C

Personal Portfolio Website - HTML/CSS/JS ⚲
Here is a simple project made with HTML and CSS, where i present my CV, my previous work and who I am.
Technologies Used : HTML ,CSS, Javascript

CERTIFICATES

Cambridge English:
First (FCE)
Level : C1
